Jenkins

Introduction

CI
CD
CD

Installation

- a) Generic Way
- b) Install Installable software for respective Operating System
- c) Deploy war file into Tomcat server

Jenkins Directory structure

Create the ANT Project using FreeStyle Project

- a) Integrate ANT software if not done.
- b) Configure EMail Functionality
- c) Integrate the SonarQube server and Enable the SonarQube for Jobs
- d) Deploy the App into Tomcat
 - 1) Through “Deploy to container “ plugin.
 - 2) Through script
- e) Poll SCM
- f) Build Periodically
- g) Web Hooks
- h) Discard Old Build
- i) Slack integration
- j) JACOCO plugin

Deploy the App into JBoss/WildFly

- a) Through script
- b) Through “Deploy to container “ plugin.

Create the Maven Project using Freestyle

Integrate Maven software if not done.

Integrate Nexus With Jenkins

Integrate SonarQube with Jenkins

Deploy the App into Tomcat

- 1) Through “Deploy to container “ plugin.
- 2) Through script

Create the Maven Project using Maven Projects

Plugin Management

- a) **Safe Restart Plugin** : This plugin allows you to restart Jenkins safely.

Note: If you see below error while restarting

Jenkins cannot restart itself as currently configured.

Solution: Restart your command prompt in Administrator mode. So that you are having your all permission to run window as a service.

- b) **Next Build Number Plugin** : Sets the build number Jenkins will use for a job's next build.

- c) **Email Extension Plugin** :

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author Web site	Mithun Reddy L http://mithuntechnologies.com
---------------------------------------	---	--------------------	---

d) **SonarQube Scanner for Jenkins :**

e) **Schedule Build Plugin :**

f) **Artifactory Plugin :** This plugin allows deploying maven artifacts and build info to Artifactory.

h) **Cloud Foundry Plugin :** Pushes a project to Cloud Foundry or a CF-based platform (e.g. IBM Cloud, Pivotal, Stackato) at the end of a build.

i) **Blue Ocean :**

k) **Deploy to container :** For deploying app into Tomcat server/Wildfly/Jboss.

l) **Build Name Setter:** This plug-in sets the display name of a build to something other than #1, #2, #3, ...

Port Number Change

Build with parameters

Create the PipeLine Project Jobs

Create the Mulibranch Pipeline Project Jobs

<http://localhost:8080/env-vars.html/>

Create Master/Slave

Backup

Integrate the Urban Code Deploy server with Jenkins
Deploy the App into IBM Cloud

Introduction

Jenkins, is an open source Continuous Integration, cross-platform tool written in Java. Kohsuke Kawaguchi is Creator of the Jenkins CI server in 2004. Initially, it was called Hudson, but in 2011 it was renamed to Jenkins because of disputes with Oracle.

The tool simplifies the process of integration of changes in to the project and delivery of fresh builds to users.

Continuous Integration: Continuous Integration (CI) is the process of automating the build and testing of code every time a team member commits changes to version control.

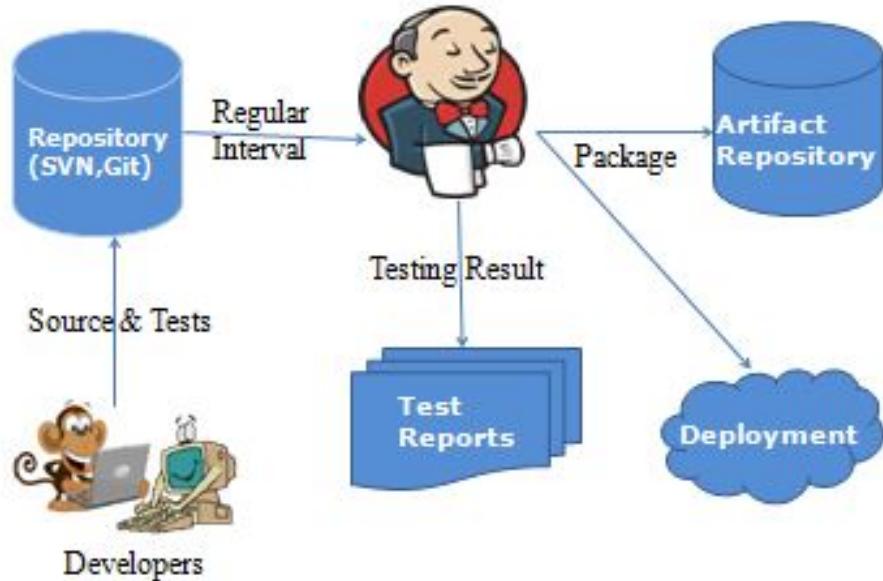

(OR)

Continuous Integration is a development practice where developers integrate their code into a shared remote repository frequently, preferably several times a day. Each integration is verified by an automated build (including test) to detect integration errors as quickly as possible.

CI Flow

Below diagram CI flow with Jenkins as Build tool.

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

CI – Benefits

- Immediate bug detection
- No integration step in the Software Development lifecycle
- A deployable system at any given point
- Record of evolution of the project

Continuous Delivery: Any and every successful build that has passed all the relevant automated tests and quality gates can potentially be deployed into production via fully automated one click process.

Continuous Deployment: The practicing of automatically deploying every successful build directly into production without any manual steps known as Continuous deployment.

(OR)

It is closely related to Continuous Integration and refers to keeping your application deployable at any point or even automatically releasing to a test or production environment if the latest version passes all automated tests.

CONTINUOUS DELIVERY

CONTINUOUS DEPLOYMENT

What Jenkins can do?

- Integrate with many different Version Control Systems (GitHub, CVS, SVN, TFS ...)
- Generate test reports (JUnit)
- Push the builds to various artifact repositories
- Deploys directly to production or test environments
- Notify stakeholders of build status (Through Email)

Benefits of Jenkins

- ✓ Its an open source tool with great community support.
- ✓ Easy to install and It has a simple configuration through a web-based GUI, which speeds up the Job
- ✓ It has around 1000+ plugins to ease your work. If a plugin does not exist, just code it up and share with the community (<https://plugins.jenkins.io/>).
- ✓ Its built with Java and hence, it is portable on all major platforms.
- ✓ Good documentation and enriched support articles/information available on internet which will help beginners to start easy.
- ✓ Specifically, for a test only project, it is used to schedule jobs for regression testing without manual intervention and hence monitor infrastructural and functional health of a application.

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

It can be used like a scheduler for integration testing and also can be used to validate new deployments/environments on a single click on a Build now button.

The diagram below depicts that Jenkins is integrating various DevOps stages:

List of popular Continuous Integration tools

<u>SNo</u>	<u>Product</u>	<u>Is Open Source?</u>
1	Jenkins	Yes
2	Cloudbees Jenkins	No
2	Bamboo	No
3	Cruise Control	Yes
4	Travis CI	Yes and Paid also
5	Circle CI	Yes and Paid also
6	GitLab CI	Yes and Paid
7	TeamCity	Yes and Paid

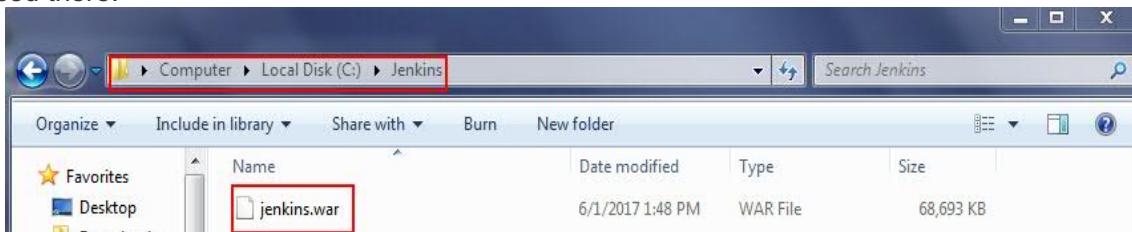

Jenkins Installation

- Jenkins is java based CI tool, so we need to install jdk/jre before installing.
- **Pre-Requisite Software:** Java (Check weather java is installed or not with java -version command)
- We can Install Jenkins in 3 ways.

Method 1 Windows OS:

Step 1: Download jenkins.war file from <https://jenkins.io/download/>

Step 2: Now copy 'jenkins.war' in a folder. I have created one folder like Jenkins in C drive and placed there.

Step 3: Now open command prompt and go to the path, where jenkins.war is available and execute the below command.

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author Web site	Mithun Reddy L http://mithuntechnologies.com
---------------------------------------	---	--------------------	---

java -jar jenkins.war

```
C:\Jenkins>dir
 Volume in drive C has no label.
 Volume Serial Number is C6A9-A8C7

 Directory of C:\Jenkins

07/01/2017  10:20 PM    <DIR>          .
07/01/2017  10:20 PM    <DIR>          ..
06/01/2017  01:48 PM           70,340,821 jenkins.war
                           1 File(s)      70,340,821 bytes
                           2 Dir(s)   253,322,514,432 bytes free

C:\Jenkins>java -jar jenkins.war
```

Note: `java -jar jenkins.war` ---> With Default Port No 8080
`java -jar jenkins.war --httpPort=8081` ---> With customised Port No
`java -jar jenkins.war --help` ---> Displays the all possible options.
`nohup java -jar jenkins.war > $LOGFILE 2>&1` ---> In Linux server, Even if terminal close also job will run in background.

Step 4: After executing the above command, you should see something like below.

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author Web site	Mithun Reddy L http://mithuntechnologies.com
---------------------------------------	---	--------------------	---

Step 5: Once Jenkins has started, you should now be able to access it by using URL -
<http://localhost:8080>

Note: Jenkins will run on 8080 port number by default.

Jenkins 1.534 and earlier ships with Winstone, so no additional installation needed. Just run with `java -jar jenkins.war`.

Jenkins comes bundled as a WAR file that you can run directly using an embedded servlet container. Jenkins uses the lightweight Winstone servlet engine to allow you to run the server out of the box, without having to configure a web server yourself.

Getting Started

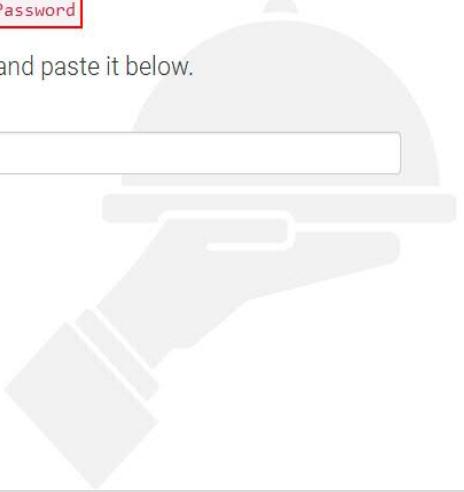

Unlock Jenkins

To ensure Jenkins is securely set up by the administrator, a password has been written to the log ([not sure where to find it?](#)) and this file on the server:

C:\Users\IBM_ADMIN\.jenkins\secrets\initialAdminPassword

Please copy the password from either location and paste it below.

Administrator password

Continue

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author Web site	Mithun Reddy L http://mithuntechnologies.com
---------------------------------------	---	--------------------	---

Getting Started

Instance Configuration

Jenkins URL:

<http://ec2-13-127-76-104.ap-south-1.compute.amazonaws.com>

The Jenkins URL is used to provide the root URL for absolute links to various Jenkins resources. That means this value is required for proper operation of many Jenkins features including email notifications, PR status updates, and the `BUILD_URL` environment variable provided to build steps.

The proposed default value shown is **not saved yet** and is generated from the current request, if possible. The best practice is to set this value to the URL that users are expected to use. This will avoid confusion when sharing or viewing links.

Jenkins 2.150.3

[Not now](#)

[Save and Finish](#)

Getting Started

Jenkins is ready!

Your Jenkins setup is complete.

[Start using Jenkins](#)

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author Web site	Mithun Reddy L http://mithuntechnologies.com
---------------------------------------	--	--------------------	---

Method 2:

You can simply deploy the Jenkins WAR in your application server - with Tomcat, for example, you can simply place the jenkins.war file in the webapps Tomcat directory.

Start the tomcat server as follows.

```
>cd TOMCAT_HOME/bin directory
```

Windows

```
>startup.bat (OR) > catalina.bat start
```

MAC/Linux:

```
#startup.sh (OR) > catalina.sh start
```

Tomcat will run 8080 port on by default.

Note: netstat -a will give the port numbers.

If you are running Jenkins on an application server, the URL to use to access Jenkins will be slightly different. For example, on a Tomcat installation by default, you can access Jenkins in your web browser at <http://localhost:8080/jenkins>.

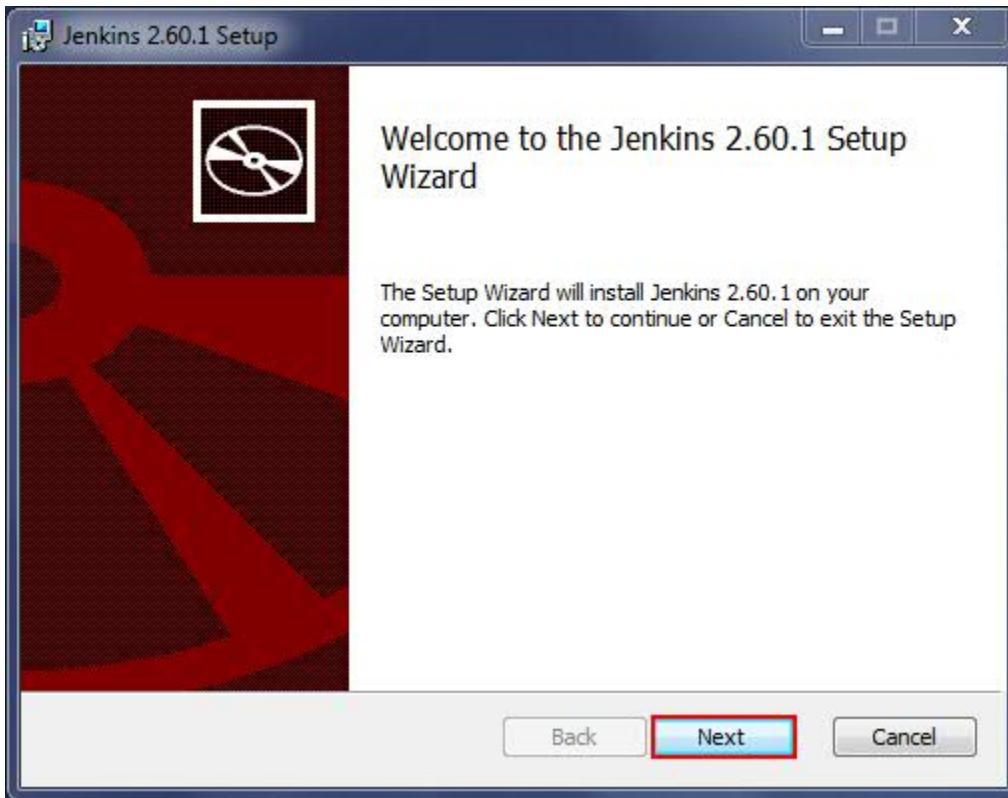

Method 3: Windows

Click on below icon.

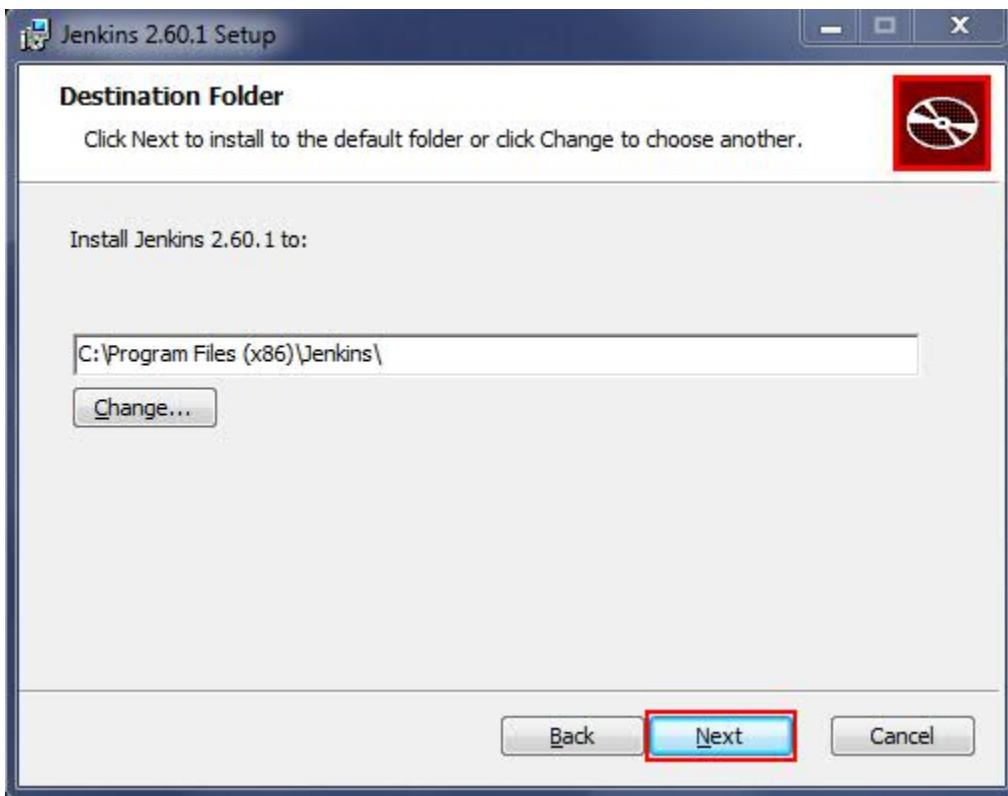

You will get the below screen

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author Web site	Mithun Reddy L http://mithuntechnologies.com
---------------------------------------	--	--------------------	---

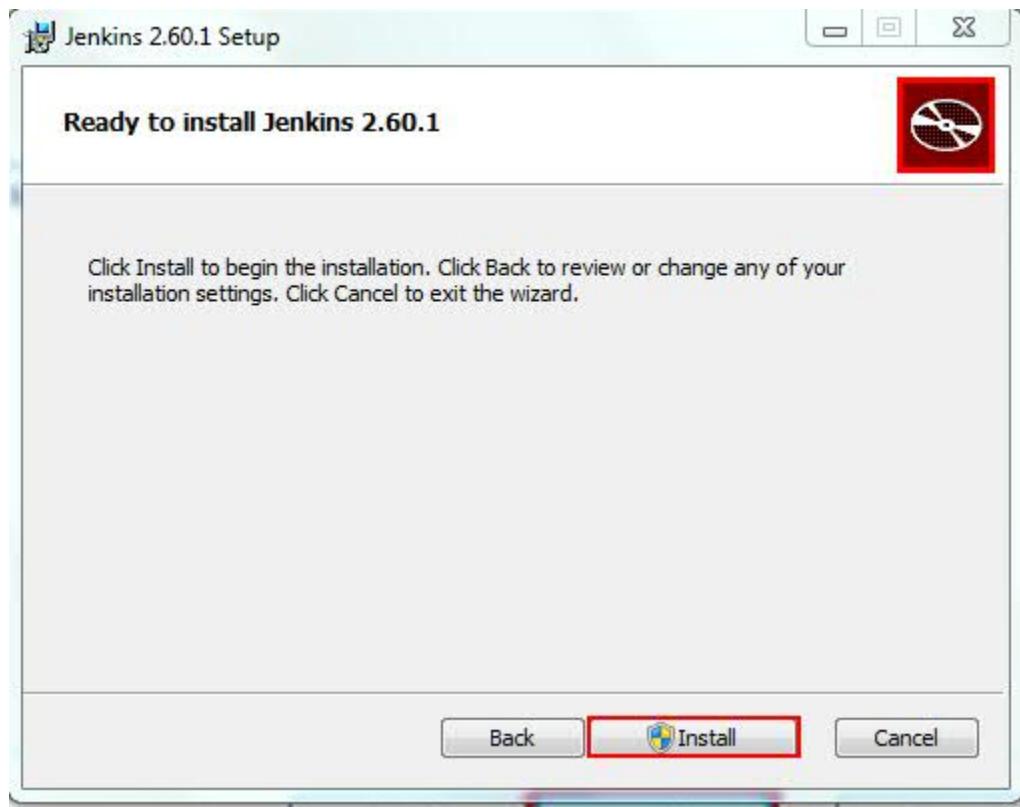

Click on Next

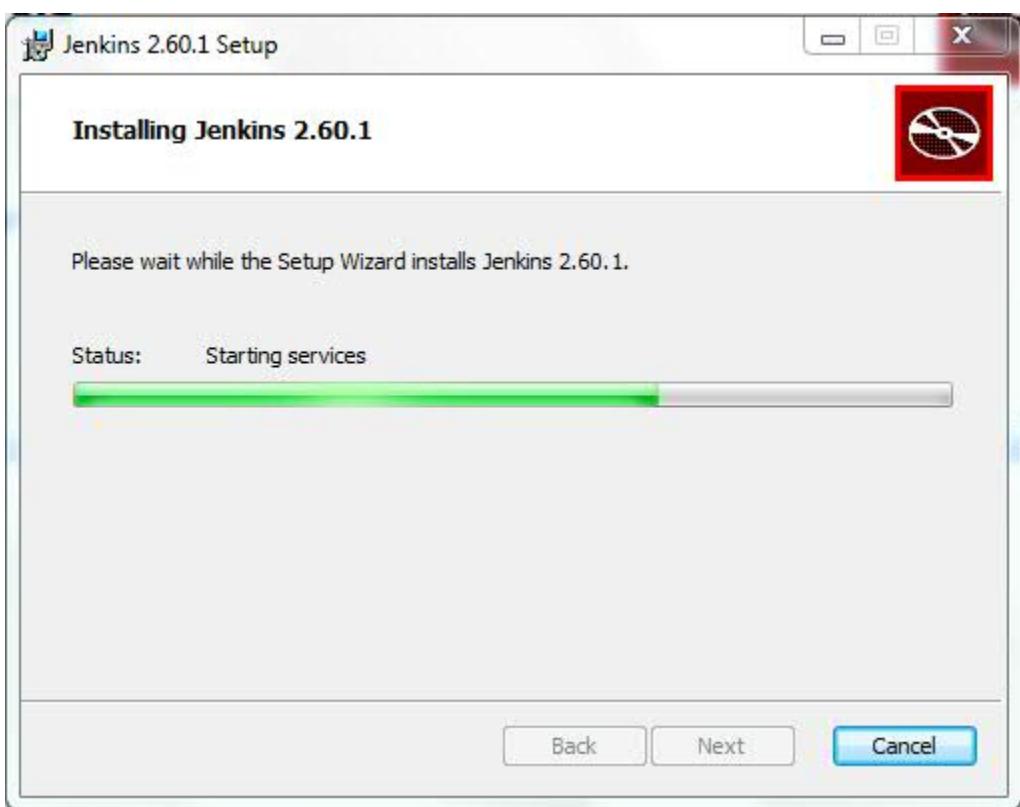

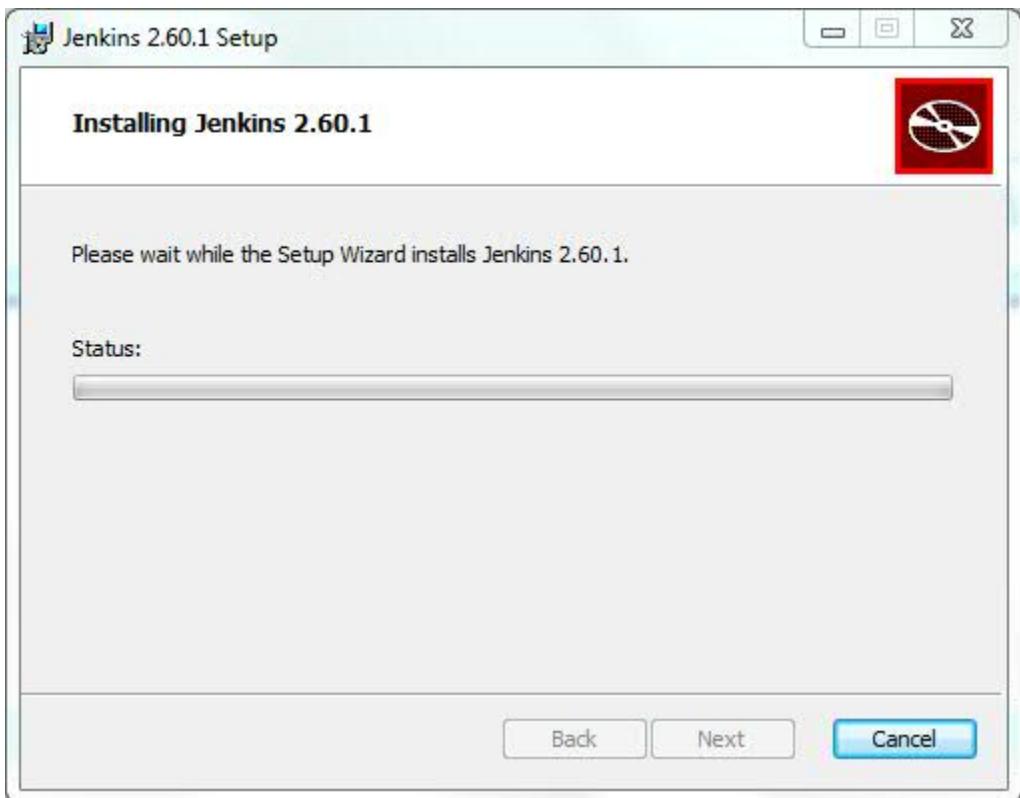

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author Web site	Mithun Reddy L http://mithuntechnologies.com
---------------------------------------	--	--------------------	---

Click on Next

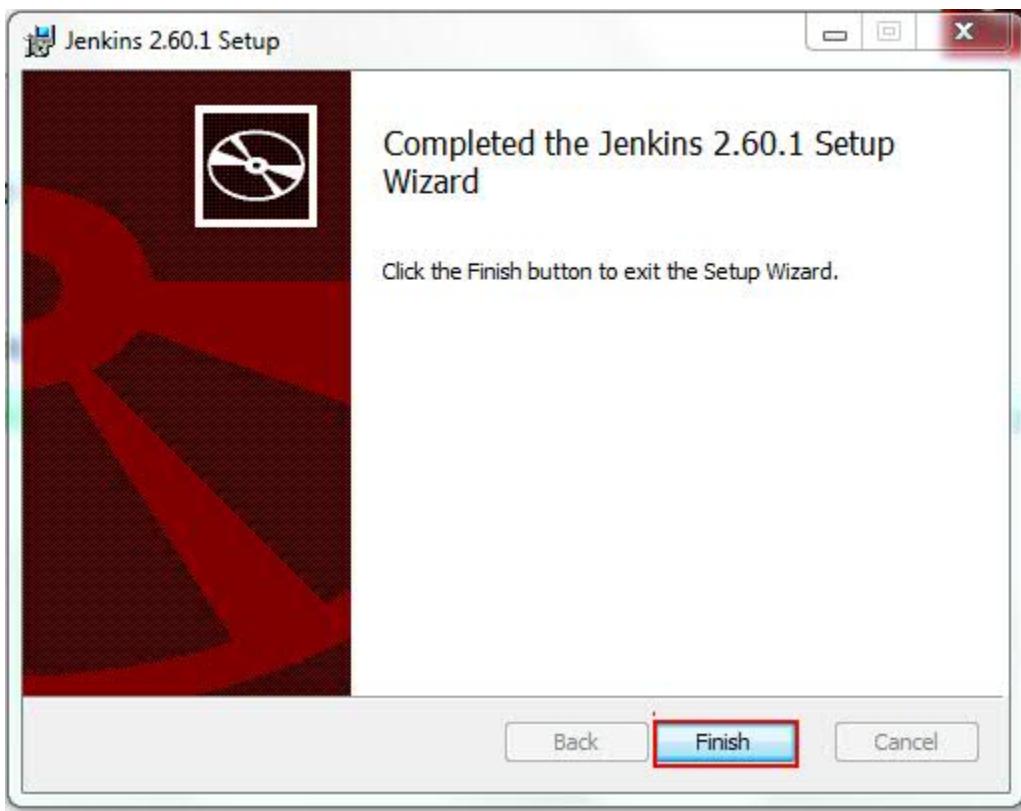

Click on Install

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author Web site	Mithun Reddy L http://mithuntechnologies.com
---------------------------------------	--	--------------------	---

Click on Finish

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author Web site	Mithun Reddy L http://mithuntechnologies.com
---------------------------------------	--	--------------------	---

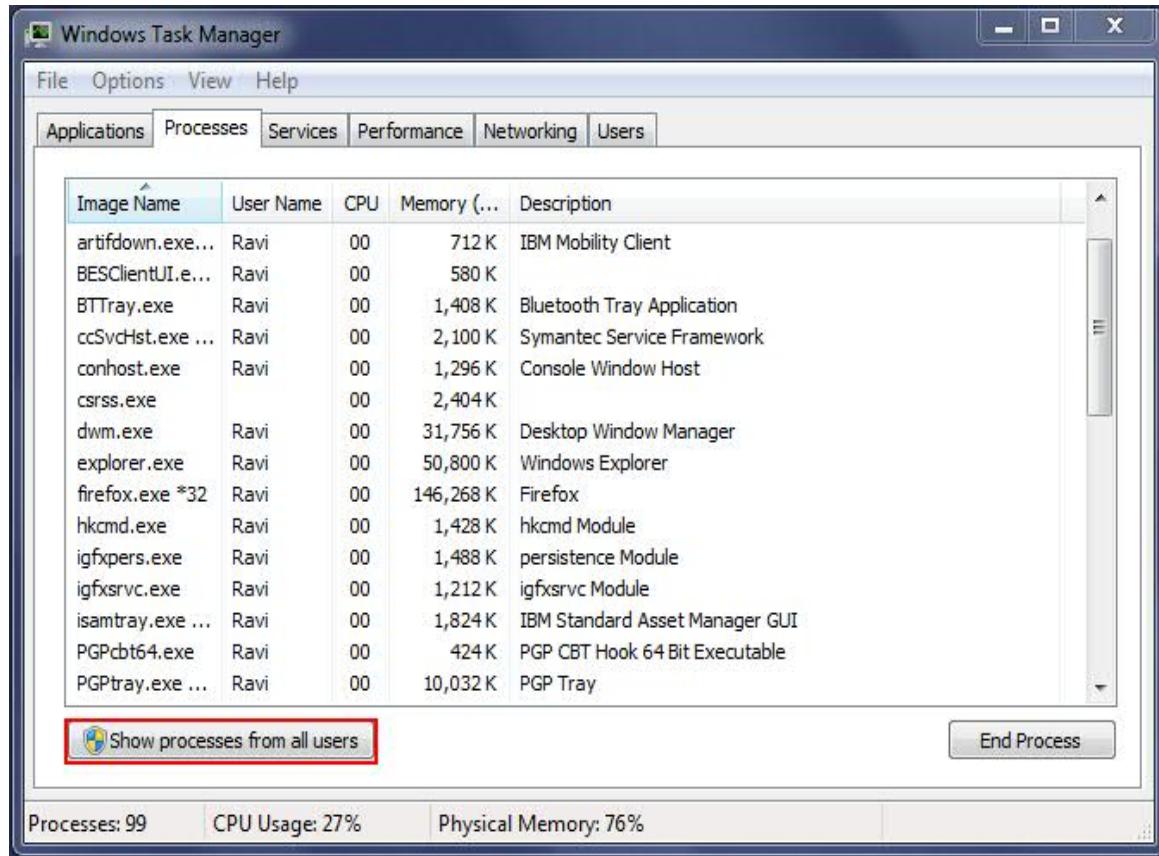

Once it successfully installed it will open by default in browser. Otherwise open the below url in browser.

<http://localhost:8080>

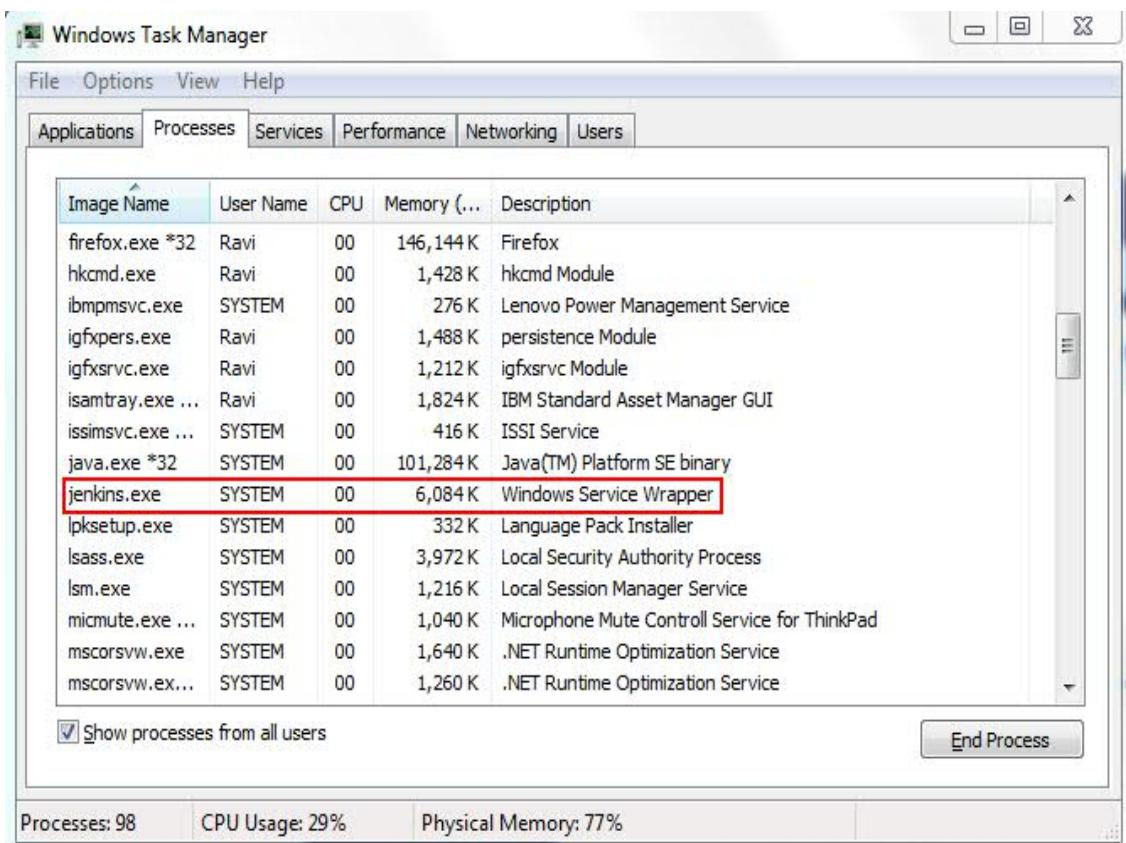

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

Once it got installed successfully, you will see Jenkins service in task manager list as follows.

Note: Sometimes you will not see, so click on Show process from all users.

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

Method 3 Linux:

```
yum -y install wget
wget -O /etc/yum.repos.d/jenkins.repo https://pkg.jenkins.io/redhat-stable/jenkins.repo
rpm --import https://pkg.jenkins.io/redhat-stable/jenkins.io.key
yum install jenkins -y
```

Once the installation of Jenkins completed stop firewall or add the Jenkins port in Firewall in the following way.

```
# firewall-cmd --zone=public --add-port=8080/tcp --permanent
# firewall-cmd --zone=public --add-service=http --permanent
# firewall-cmd --reload
# firewall-cmd --list-all
```

Now we can start the Jenkins Service by using systemctl as shown below

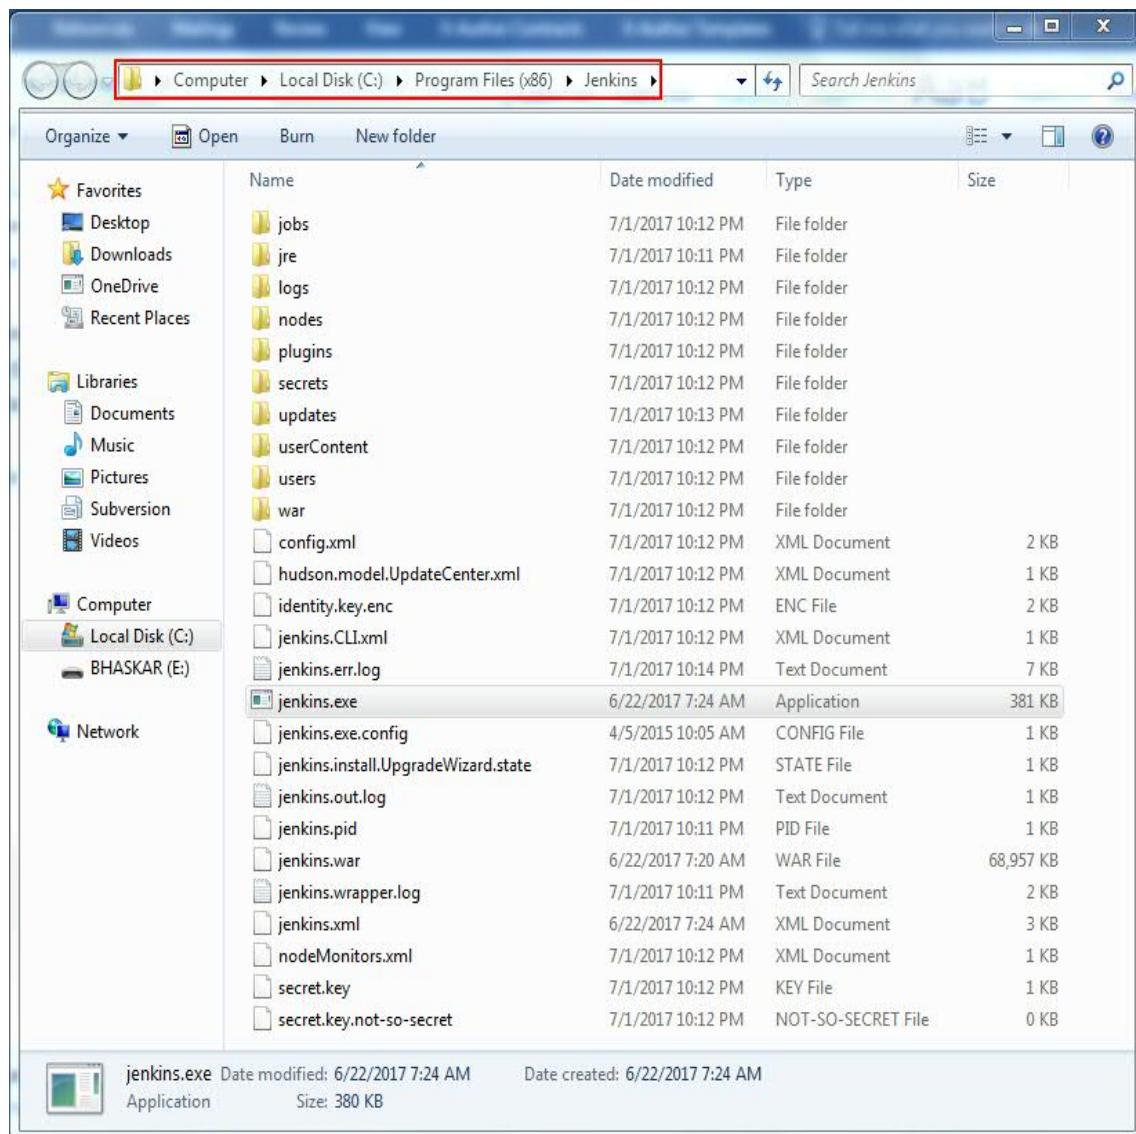

```
# systemctl start jenkins
# systemctl status Jenkins
```

Now we can access the Jenkins webpage by using the Url: <http://ipaddress of server:8080> or <http://localhost:8080>

Reference Url: <https://wiki.jenkins.io/display/JENKINS/Installing+Jenkins+on+Red+Hat+distributions>

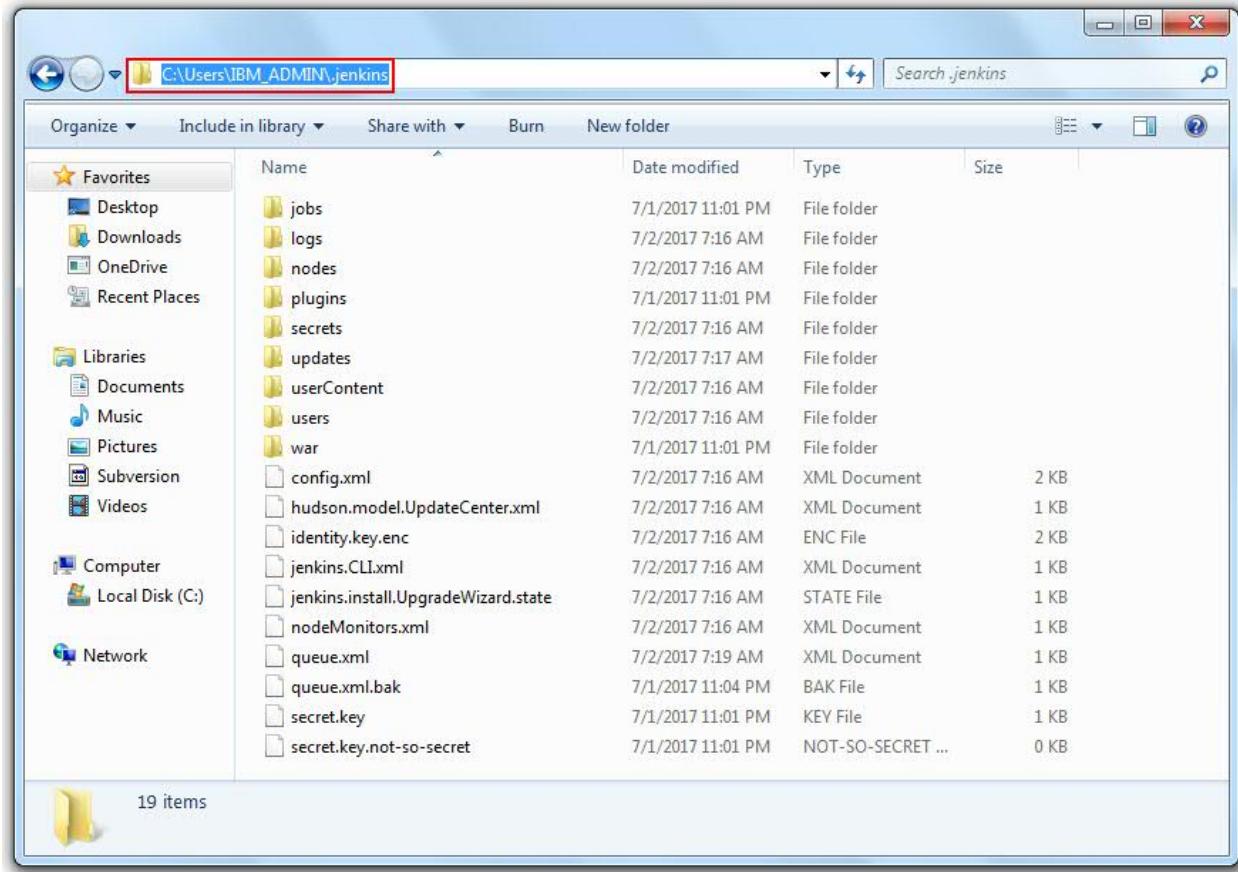

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

Below screen, installed the Jenkins using .exe file.

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

Below screen, installed the Jenkins using .war file (java -jar jenkins.war).

Open <http://localhost:8080/systemInfo> and check JEKNINS_HOME from browser.

.jenkins : This is the default Jenkins home directory (may be .hudson in older installations) and it will be placed in user's home directory (C:\Users\MITHUN_ADMIN\ ---> Windows & /Users/BhaskarReddy --> MAC).

Jenkins home directory contains the below sub directories and configuration files (.xml).

```

+- jobs
  +- [JOBNAME]   : Sub directory for each job
  +- config.xml  : Job configuration file
  +- latest       : Symbolic link to the last successful build)
  +- builds
    +- [BUILD_ID]  : for each build one build id
      +- build.xml   : build result summary
      +- log          : log file
      +- changelog.xml (change log)
  +- logs          ()
  +- nodes         ()
  +- plugins       : This directory contains any plugins that you have installed.
  +- secrets       ()
  +- updates       : This is an internal directory used by Jenkins to store information
                    about available plugin updates.

```

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author Web site	Mithun Reddy L http://mithuntechnologies.com
--	--	---------------------------	--

+
- userContent : You can use this directory to place your own custom content onto your Jenkins server. You can access files in this directory at <http://localhost/jenkins/userContent> (if you are running Jenkins on an application server) or <http://localhost:8080/userContent> (if you are running in stand-alone mode).

+
- users : If you are using the native Jenkins user database, user accounts will be stored in this directory.

+
- war : This directory contains the expanded web application. When you start Jenkins as a stand-alone application, it will extract the web application into this directory.

+
- config.xml (jenkins root configuration)
+
- *.xml (other site-wide configuration files)
+
- fingerprints (stores fingerprint records)

<http://localhost:8080/configure>

Home directory: By default, Jenkins stores all of its data in this directory on the file system. Under the Advanced section, you can choose to store build workspaces and build records elsewhere.

There are a few ways to change the Jenkins home directory:

- Edit the JENKINS_HOME variable in your Jenkins configuration file (e.g. /etc/sysconfig/jenkins on Red Hat Linux).
- Use your web container's admin tool to set the JENKINS_HOME environment variable.
- Set the environment variable JENKINS_HOME before launching your web container, or before launching Jenkins directly from the WAR file.
- Set the JENKINS_HOME Java system property when launching your web container, or when launching Jenkins directly from the WAR file.
- Modify web.xml in jenkins.war (or its expanded image in your web container). This is not recommended.

This value cannot be changed while Jenkins is running.

It is shown here to help you ensure that your configuration is taking effect.

Ex: /Users/BhaskarReddy/.jenkins is for my Jenkins which is installed in my local MAC.

Workspace Root Directory: Specifies where Jenkins will store workspaces for builds that are executed on the master.

Build Record Root Directory: Specifies where Jenkins will store build records on the file system. This includes the console output and other metadata generated by a build.

System Message: This message will be displayed at the top of the Jenkins main page.

of executors: It shows how many builds run at a time. E.g.: If give 2, here two builds are running.

Labels:

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author Web site	Mithun Reddy L http://mithuntechnologies.com
---------------------------------------	---	--------------------	---

Usage: Controls how Jenkins schedules builds on this node.

Quiet period:

SCM checkout retry count:

Restrict project naming:

Naming Strategy

Strategy

Default ---> This is the default configuration and allows the user to choose any name they like.

Pattern ----> Define a pattern (regular expression) to check whether the job name is valid or not. Forcing the check on existing jobs, will allow you to enforce a naming convention on existing jobs - e.g. even if the user does not change the name, it will be validated with the given pattern at every submit and no updates can be made until the name confirms.

This option does not affect the execution of jobs with non-compliant names. It just controls the validation process when saving job configurations.

Global properties

Environment variables

		Web site	http://mithuntechnologies.com

Enter an item name

» Required field

 **Freestyle project**
This is the central feature of Jenkins. Jenkins will build your project, combining any SCM with any build system, and this can be even used for something other than software build.

 **Pipeline**
Orchestrates long-running activities that can span multiple build slaves. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.

 **External Job**
This type of job allows you to record the execution of a process run outside Jenkins, even on a remote machine. This is designed so that you can use Jenkins as a dashboard of your existing automation system.

 **Multi-configuration project**
Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.

 **Folder**
Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.

 **GitHub Organization**
Scans a GitHub organization (or user account) for all repositories matching some defined markers.

 **Multibranch Pipeline**
Creates a set of Pipeline projects according to detected branches in one SCM repository.

Freestyle project: This is the central feature of Jenkins. Jenkins will build your project combining any SCM and any build system.

A Free-Style project is a project that can incorporate almost any type of build. The Free-Style project is the more "generic" form of a project. You can execute shell/dos scripts, invoke ant, and a lot more. Majority of the plugins are written to use the free-style project.

Maven project: A maven project is a project that will analyze the pom.xml file in greater detail and produce a project that's geared towards the targets that are invoked. The maven project is smart enough to incorporate build targets like the javadoc or test targets and automatically setup the reports for those targets.

Multi-configuration project: The "multiconfiguration project" (also referred to as a "matrix project") lets you run the same build job in many different configurations. This powerful feature can be useful for testing an application in many different environments, with different databases, or even on different build machines. We will be looking at how to configure multiconfiguration build jobs later on in the book.

Monitor an external job: The "Monitor an external job" build job lets you keep an eye on non-interactive processes, such as cron jobs.

Specify when and how your build should be triggered. The following example polls the Git repository every 5 min. It triggers a build, if something has changed in the repo.

The screenshot shows the Jenkins 'Build Triggers' configuration page. The 'Build Triggers' tab is selected. Under the 'Poll SCM' section, the checkbox 'Poll SCM' is checked, and the schedule 'H/5 * * * *' is specified. A note below indicates the next run will be at Tuesday, 27 June, 2017 6:25:22 AM IST.

The screenshot shows the Jenkins 'Build Environment' configuration page. It includes options for 'Delete workspace before build starts', 'Abort the build if it's stuck', 'Add timestamps to the Console Output', and 'Use secret text(s) or file(s)'.

The screenshot shows the Jenkins 'Build' configuration page. It features an 'Invoke Ant' step with a 'Targets' field and an 'Advanced...' button. Below the main configuration area is an 'Add build step' dropdown menu.

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

Source Code Management

The screenshot shows the Jenkins Global Tool Configuration page under the 'Source Code Management' section. It has two radio button options: 'None' and 'Git'. The 'Git' option is selected. Below it, there's a 'Repositories' section with a single entry. The 'Repository URL' field contains 'https://github.com/MithunTechnologiesDevOps/ant-web-application.git'. A red error message box is displayed below the URL field, stating: 'Failed to connect to repository : Error performing command: git ls-remote -h https://github.com/MithunTechnologiesDevOps/ant-web-application.git HEAD'. There are 'Advanced...' and 'Add Repository' buttons at the bottom right.

Solution

Go to the Jenkins dashboard, Click on Manage Jenkins ---> Global Tool Configuration

In Git option,

Give the Gitbash installed path in **Path to Git executable** text filed as follows.

The screenshot shows the Jenkins Global Tool Configuration page under the 'Git' section. It lists a single 'Git' installation with the name 'Default'. The 'Path to Git executable' field is filled with 'C:\Program Files\Git\bin\git.exe'. There are checkboxes for 'Install automatically' and 'Advanced...' buttons. At the bottom are 'DELETE GIT', 'SAVE' (which is highlighted in red), and 'APPLY' buttons.

Possible Errors

```
+refs/heads/*:refs/remotes/origin/*" returned status code 128:  
stdout:  
stderr: remote: Password authentication is not available for Git operations.  
remote: You must use a personal access token or SSH key.
```

Solution

If you see this error, generate SSH or PAT and use these keys instead of password.

Disable Build:

A disabled Build will not be executed until you enable it again. This option often comes in handy to suspend a build during maintenance work or major refactoring.

Once the project is configured in Jenkins then all future builds are automated. It has basic reporting features like status and weather reports (job health).

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

Status of the build	Description
	Failed
	Unstable
	Success
	Pending
	Disabled
	Aborted

Figure a: Build status

Job health	Description
	No recent builds failed
	20-40% of recent builds failed
	40-60% of recent builds failed
	60-80% of recent builds failed
	All recent builds failed
	Unknown status

Figure b: Weather reports

To Install any Jenkins Plugin, follow below steps

Manage Jenkins ---> Manage Plugins ---> Select the Plugin name (HTML Published plugin) ---> Install Without Restart

Package Names:

SafeRestartPlugin:

SonarQube Scanner:

JavaDoc Plugin

jQuery Plugin

Next Build Number Plugin: In UI (Set Next Build Number)

Email Extension Plugin: Is used to send the mail from Jenkins.

Delivery Pipeline Plugin: To move war/ear/jar into UCD.

Maven Integration plugin: For Maven project.

SSH Agent:

Pipeline Maven Integration Plugin: To see Maven Project option while creating job.

Run Condition Plugin

Conditional BuildStep

Parameterized Trigger plugin:

Cloud Foundry Plugin: To deploy app into Bluemix using cloud foundry.

Embeddable Build Status:

JobConfigHistory Plugin: This plugin saves a copy of the configuration file of a job (config.xml) for every change made and of the system configuration. You can also see what changes have been made by which user if you configured a security policy.

Repository browser:

Role-based Authorization Strategy:

Slack Notification Plugin:

Cobertura Plugin: In UI we will see as Coverage Trend.

Artifactory Plugin: For JFrog Or any other repositories.

Deploy to container Plugin: For deploying war/ear into Application Server or Webserver.

Build History Metrics plugin:

Hudson global-build-stats plugin:

Delivery Pipeline View:

Enable project-based security

Thin Backup:

---------------------------------------	---	--------------------	---

Create the Maven project/job in Jenkins

Method 1:

Install the **Maven Integration Plugin** and follow the below steps.

Create the Job using Freestyle project and in the Build section click on Add build step and select the Invoke Top level Maven targets.

Method 2:

Install the **Maven Integration plugin** and follow the below steps.

Create the New Item as follows.

Provide the item name and select the Maven project and click on OK.

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

Enter an item name

Maven-Web-ProjectName

» Required field

Freestyle project

This is the central feature of Jenkins. Jenkins will build your project, combining any SCM with any build system, and this can be even used for something other than software build.

Maven project

Build a maven project. Jenkins takes advantage of your POM files and drastically reduces the configuration.

Pipeline

Orchestrates long-running activities that can span multiple build slaves. Suitable for building pipelines (formerly known as workflows) and/or organizing complex activities that do not easily fit in free-style job type.

External Job

This type of job allows you to record the execution of a process run outside Jenkins, even on a remote machine. This is designed so that you can use Jenkins as a dashboard of your existing automation system.

Multi-configuration project

Suitable for projects that need a large number of different configurations, such as testing on multiple environments, platform-specific builds, etc.

Folder

Creates a container that stores nested items in it. Useful for grouping things together. Unlike view, which is just a filter, a folder creates a separate namespace, so you can have multiple things of the same name as long as they are in different folders.

OK

GitHub Organization

Trans a GitHub organization (or user account) for all repositories matching some defined markers.

Once you click on OK, you will come to jobs configuration page as follows.

To restart Jenkins manually, you can use either of the following URLs:

(jenkins_url)/safeRestart - Allows all running jobs to complete. New jobs will remain in the queue to run after the restart is complete.

Ex: <http://localhost:8080/safeRestart>

(jenkins_url)/restart - Forces a restart without waiting for builds to complete.

Ex: <http://localhost:8080/restart>

(OR)

You can install one plug called **SafeRestartPlugin** , once installed it will give one option Jenkins dashboard as follows.

Port Number Change

Open the /etc/default/jenkins file and change the below parameter with custom port number.
JENKINS_PORT

By default 8080 is the port, change from 8080 something like 8082 as follow.

#vi /etc/sysconfig/jenkins

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author Web site	Mithun Reddy L http://mithuntechnologies.com
---------------------------------------	---	--------------------	---

JENKINS_PORT="8082"

Once you change the port restart the jenkins service by using below command.
#service jenkins restart

Jenkins - Security

How to create the users in Jenkins?

Click on Manage Jenkins ---> Manage Users ---> Create User ---> Provide the below details

Username:

Password:

Confirm password:

Full name:

E-mail address:

Click on Create User

The screenshot shows the Jenkins 'Create User' interface. At the top, there's a navigation bar with 'Back to Dashboard', 'Manage Jenkins', and a 'Create User' button. The main area is titled 'Create User' and contains five input fields: 'Username' (devops), 'Password' (redacted), 'Confirm password' (redacted), 'Full name' (DevOps Engineer), and 'E-mail address' (devopstrainingblr@gmail.com). A large red box highlights the entire form area, and another red box highlights the 'Create User' button at the bottom.

How to see the list of Users in Jenkins?

Once you logged into Jenkins Dashboard

Go to Left Side Navigation Bar ---> Click on People

You will see list of users available in Jenkins.

Includes all known "users", including login identities which the current security realm can enumerate, as well as people mentioned in commit messages in recorded changelogs.

User Id	Name	Last Commit Activity	On ↓
bhaskar0504	Bhaskar Reddy L	N/A	
MANAGE_DOMAINS	MANAGE_DOMAINS	N/A	
devops	DevOps Engineer	N/A	

Icon: S M L

How to remove/delete the User in Jenkins?

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author Web site	Mithun Reddy L http://mithuntechnologies.com
---------------------------------------	---	--------------------	---

Click on Manage Jenkins ---> Manage Users ---> click on below Gear icon one circle with cross symbol

It will ask Are you sure about deleting the user from Jenkins? confirmation message Click on ---> Yes

Now User is deleted successfully.

How to change the password for existing users?

Note: Need to document

Project-based Matrix Authorization Strategy is an authorization method using which we can define which user or group can do what actions on which job. This gives us a fine-grained control over user/group permissions per project.

To Enable the Project-based Matrix Authorization Strategy need to configure in Jenkins as follows.

Step 1: Click on Manage Jenkins and choose the ‘Configure Global Security’ option.

Step 2: Click on Enable Security option.

As an example, let's assume that we want Jenkins to maintain it's own database of users, so in the Security Realm, Select the radio button of ‘Jenkins’ own user database’.

Step 3: Under Authorization, select “Project-based Matrix Authorization Strategy” and add 2 or 3 users, one administrator (say devops) and a regular user (say user1 and user2).

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

- Gitlab Authentication Plugin
- HTTP Header by reverse proxy
- Jenkins' own user database
- Allow users to sign up
- LDAP
- Unix user/group database

Authorization

- Anyone can do anything

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

The screenshot shows the Jenkins 'Authorization' configuration page. The 'Project-based Matrix Authorization Strategy' is selected. The interface includes a matrix table where users (devops, user1, user2, Anonymous) are mapped to various Jenkins features (Overall, Credentials, Agent, Job, Run, View, SCM). Global permissions are set in the 'Overall' row. The 'Read' permission for the 'Overall' row is highlighted with a red box. The 'Save' button at the bottom left is also highlighted with a red box.

All the checkboxes present besides users are for setting global permissions. Select all checkboxes against admin user to give admin full permissions.

For user1, we are selecting read permissions under jobs. With this, user1 would now have read permission to view all jobs which we would be creating later on.

We have to provide read permission under “Overall” category to any regular user otherwise the user won’t be able to see anything after login.

All the checkboxes present besides users are for setting global permissions. Select all checkboxes against admin user to give admin full permissions. For user1, we are selecting read permissions under jobs. With this, user1 would now have read permission to view all jobs which we would be creating later on. We have to provide read permission under “Overall” category to any regular user otherwise the user won’t be able to see anything after login.

Finally, you can click on Save button.

Below scenario will applicable in Matrix based security

Error : Access Denied

<<User>> is missing the Overall/Read permission

How to enable the Poll SCM in Jenkins?

Step 1: Install the “Git plugin” in Jenkins.

Step 2: Select the job which you need to enable hook and click on Configure ---> In **Build Triggers** Section enable the **Poll SCM**
And provide the values as follows.

Build Triggers

- Trigger builds remotely (e.g., from scripts)
- Build after other projects are built
- Build periodically
- GitHub hook trigger for GITScm polling
- Poll SCM

Schedule: `0 */22 * * *`

⚠ Spread load evenly by using 'H */22 * * *' rather than '0 */22 * * *'
Would last have run at Thursday, 6 July, 2017 12:00:07 AM IST; would next run at Thursday, 6 July, 2017 10:00:07 PM IST.

Ignore post-commit hooks

Deploy the application into Tomcat

Install the “**Deploy to container**” plugin.

Open the job which you want to configure deploy, and click on Configure and in **Post-build actions** tab, click on **ADD POST-BUILD ACTION** and select the **Deploy war/ear to container** as follows.

```
<user username="admin" password="passw0rd" roles="admin-gui,manager-gui,manager-script" />
```

(OR)

Add the below script in **Execute shell**

Linux/MAC for Tomcat

```
#!/bin/sh
echo "Starting to copy the build artifact"
cp $WORKSPACE/war/SampleAntProject.war
/Users/bhaskarreddyl/BhaskarReddyL/Softwares/Running/apache-tomcat-9.0.6/webapps/
echo "Deployed the build artifact into tomcat server successfully"
```

Windows

```
echo "Starting to copy the build"
copy %WORKSPACE%\war\SampleAntProject.war C:\\apache-tomcat-8.5.23\\webapps\
echo "Copied the build to tomcat"
```

Linux/MAC for WildFly

```
#Deploy in WildFly server
```

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

```
#!/bin/sh
echo "Starting to copy the build"
cp $WORKSPACE/war/SampleAntProject.war
/Users/bhaskarreddyl/BhaskarReddyL/Softwares/Running/wildfly11.0.0.Final/standalone/deployment
s/
echo "Copied the build to WildFly successfully"
```

Build

The screenshot shows the Jenkins 'Build' configuration page. It includes two build steps:

- Invoke Ant**: Targets field is empty. Advanced... button is present.
- Execute shell**: Command field contains the deployment script. The command is highlighted with a red box:

```
#!/bin/sh
echo "Starting to copy the build"
scp $WORKSPACE/war/SampleAntProject.war /opt/apache-tomcat-7.0.78/webapps
echo "Copied the build to tomcat"
```

Below the Execute shell step, there is a link to see the list of available environment variables and an Advanced... button. At the bottom, there is an 'Add build step' dropdown.

Note: If we want to deploy in Tomcat, which is installed in any remote machine, use below lines of code.

```
scp $WORKSPACE/war/SampleAntProject.war <<User Name>>@<<ServerIP>>:/opt/apache-tomcat-7.0.78/webapps
```

```
cp %JENKINS_HOME%\jobs\%JOB_NAME%\builds\%BUILD_NUMBER%\log
C:\Users\windows7\Downloads\newfolder\
```

Integrate JFrog Artifactory with Jenkins

Install “**Artifactory Plugin**” plugin.

Jenkins – Metrics and Trends

There are various plugins which are available in Jenkins to showcase metrics for builds which are carried out over a period of time. These metrics are useful to understand your builds and how frequently they fail/pass over time. As an example, let's look at the '**Build History Metrics plugin**'. This plugin calculates the following metrics for all of the builds once installed

- Mean Time To Failure (MTTF)
- Mean Time To Recovery (MTTR)
- Standard Deviation of Build Times

Enable LDAP security to Jenkins

<http://www.scmgalaxy.com/tutorials/complete-guide-to-use-jenkins-cli-command-line>

Jenkins CLI

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author Web site	Mithun Reddy L http://mithuntechnologies.com
---------------------------------------	---	--------------------	---

Jenkins has a built-in command line interface (CLI) that allows users and administrators to access Jenkins from a script or shell environment. This can be convenient for scripting of routine tasks, bulk updates, troubleshooting, and more.

Advantages of Jenkins CLI:

- Easier
- Faster
- Memory management
- Automation tasks.

Pre-Requisites

- a) Jenkins server should run.
- b) Enable security as follows.

Go to Jenkins dashboard in Home page (e.g <http://localhost:8080/>) -> Manage Jenkins

-> Configure Global Security -> Click on “Enable security” checkbox

You can also configure “Access Control” and “Authorization” option in Global Security page.

Download the Jenkins CLI jar file as follows.

Method 1

Open the below url

<http://localhost:8080/cli/>

Jenkins CLI

You can access various features in Jenkins through a command-line tool. See [the documentation](#) for more details of this feature. To get started, download [jenkins-cli.jar](#) and run it as follows:

```
java -jar jenkins-cli.jar -s http://localhost:8080/ help
```

Click on Jenkins-cli.jar.

Method 2

Click on below url, it will automatically download the jar file.

<http://<>Jenkins Server URL>/jnlpJars/jenkins-cli.jar>

Example: <http://localhost:8080/jnlpJars/jenkins-cli.jar>

Here

Copy into any folder as follows

```
#cp jenkins-cli.jar /opt/jenkins/
```

Go to the directory where Jenkins-cli.jar is there and run the below command to get the help.

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

Login Jenkins using username and Password

```
# java -jar jenkins-cli.jar -s http://localhost:8080/ help --username devops --password passw0rd
```

Get the Version of Jenkins

```
#java -jar jenkins-cli.jar -s http://localhost:8080/ version --username devops --password passw0rd
```

Get all the jobs of Jenkins

```
#java -jar jenkins-cli.jar -s http://localhost:8080/ list-jobs --username devops --password passw0rd
```

Delete the Job

```
#java -jar jenkins-cli.jar -s http://localhost:8080/ delete-job ant-java-job-dev --username devops --password passw0rd
```

```
#java -jar jenkins-cli.jar -s http://localhost:8080/ disable-job ant-web-job-dev --username devops --password passw0rd
```

While executing above command if you see Enter passphrase, follow the below configuration.
(Manage Jenkins ---> Configure Global Security ---> enable the Enable Security ---> Apply and Save.)

Manage Jenkins ---> Configure System --->SSH Public Keys (Enter here any value, same value u can use in CLI)

Jenkins Pipeline Project

Required Plugins

- 1) Pipeline Maven Integration Plugin
- 2) JUnit Attachments Plugin
- 3) Task Scanner Plugin

In Jenkins Pipeline project, we will use one file called Jenkinsfile, in this file we will write groovy code to build process.

We will write Jenkinsfile in 2 ways.

- 1) Declarative way
- 2) Scripted way.

1) Declarative Pipeline Syntax

2) Scripted Pipeline Syntax

Jenkins Multi Branch Pipeline Project

Required Plugins

- 1) Pipeline: Multibranch

Blue Ocean Plugin

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

Build Chain Executions

Create the 3 jobs like dev, stage and prod.

Configure **prod** job with as follows.

Build Triggers

Trigger builds remotely (e.g., from scripts)

Build after other projects are built

Projects to watch: stage

Trigger only if build is stable

Trigger even if the build is unstable

Trigger even if the build fails

Build periodically

GitHub hook trigger for GITScm polling

Poll SCM

Click on **Save**.

Configure **stage** job with as follows.

Build Triggers

Trigger builds remotely (e.g., from scripts)

Build after other projects are built

Projects to watch: dev

Trigger only if build is stable

Trigger even if the build is unstable

Trigger even if the build fails

Build periodically

GitHub hook trigger for GITScm polling

Poll SCM

Post-build Actions

Build other projects

Build other projects

Projects to build: prod.

Trigger only if build is stable

Trigger even if the build is unstable

Trigger even if the build fails

Add post-build action ▾

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

Configure **dev** job with as follows.

Post-build Actions

Build other projects

Projects to build: stage

Trigger only if build is stable

Trigger even if the build is unstable

Trigger even if the build fails

Add post-build action ▾

Save **Apply**

Now you can open dev job and click on Build now.

Jenkins Master-Slave setup

Manage Jenkins ---> Manage Nodes ---> New Node
Provide the Node name and click on **OK** button.

Jenkins

Jenkins > Nodes >

Back to Dashboard Manage Jenkins New Node Configure

Node name: Node1-Mithun-Technologies

Permanent Agent

Adds a plain, permanent agent to Jenkins. This is called "permanent" because Jenkins doesn't provide higher level of integration with these agents, such as dynamic provisioning. Select this type if no other agent types apply — for example such as when you are adding a physical computer, virtual machines managed outside Jenkins, etc.

Build Queue OK

Build Executor Status

1 Idle 2 Idle

Provide all the details as follows and click on **Save** button.

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

Name

Description

of executors

Remote root directory

Labels

Usage

Launch method

Disable WorkDir

Custom WorkDir path

If defined, a custom Remoting work directory will be used instead of the Agent Root Directory. This option has no environment variable resolution so far, it is recommended to use only absolute paths.

Internal data directory

Fail if workspace is missing

[Advanced...](#)

Availability

Node Properties

- Enable node-based security
- Environment variables
- Tool Locations

Save

Note: Suppose if you don't see "Launch agent via Java Web Start" option, do the below configurations.

Manage Jenkins ---> Configure Global Security ---> enable the TCP port for JNLP agents (by default, it is Disabled.)

Agents

TCP port for JNLP agents Fixed : Random Disable

[Agent protocols...](#)

Once you click on Save you will see the Nodes and Master detail, and select the Node which we have created and click on configure.

You will see below screen and click download the slave.jar file.

Agent Node1-Mithun-Technologies (This Node
is used to build for Java Projects.)

Connect agent to Jenkins one of these ways:

- Launch agent from browser
- Run from agent command line:

```
java -jar slave.jar -jnlpUrl http://localhost:8080/computer/Node1-Mithun-Technologies/slave-agent.jnlp  
-secret 8e6c24c3e977342073d2184d051bf87f30d57acd0c63ae0a913008e65ad86f -workDir  
"/Users/bhaskarreddyl/BhaskarReddyL/Softwares/Running/jenkins/node1/workdirectory"
```

Projects tied to Node1-Mithun-Technologies

None

Copy slave.jar file into any directory
(/Users/bhaskarreddyl/BhaskarReddyL/Softwares/Running/jenkins/node1)

Go to the path where slave.jar copied and run the below command.

```
java -jar agent.jar -jnlpUrl http://localhost:8080/computer/Node1-Mithun-Technologies/slave-agent.jnlp -secret 8e6c24c3e977342073d2184d051b1fb87f30d57acd0c63ae0a913008e65ad86f -workDir "/Users/bhaskarreddyl/BhaskarReddyL/Softwares/Running/jenkins/node1/workdirectory"
```

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

```
Bhaskars-MacBook-Air:node1 bhaskarreddyl$ java -jar slave.jar -jnlpUrl http://localhost:8080/computer/Node1-Mithun-Technologies/slave-agent.jnlp -secret 8e6c24c3e977342073d2184d051b1fb87f30d57acd0c63ae0a913008e65ad86f -workDir "/Users/bhaskarreddyl/BhaskarReddyL/Softwares/Running/jenkins/node1/workdirectory"

```

Now slave become communicating to node and it is live.

Now you can use this slave for job creation.

Create one Freestyle project/any kind of project and select the Restrict where this project can be run and select the Node which you have created.

The screenshot shows the Jenkins 'General' configuration page for a project named 'Slave-Demo-Mithun-Technologies'. In the 'Restrict where this project can be run' section, the checkbox labeled 'Restrict where this project can be run' is checked. Below the checkbox, there is a 'Label Expression' field containing 'Node1-Mithun-Technologies'. A yellow warning message at the bottom of the field states: 'There's no agent/cloud that matches this assignment. Did you mean 'master' instead of 'Node'?' There is also an 'Advanced...' button at the bottom right of the configuration panel.

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

Provide the Git url and click on **Save** button.

Issue:

While building if you see below error

```
[Test] $ ant -file build-mt.xml
ERROR: command execution failed.Maybe you need to configure the job to choose one of your Ant installations?
Finished: FAILURE
```

Solution:

Go to the Manage Jenkins ---> Global Tool Configuration ---> Ant ---> Ant Installations...

The screenshot shows the Jenkins Global Tool Configuration interface for the Ant tool. A single Ant installation is listed with the name 'ANT_HOME'. The 'Install from Apache' option is selected, and the version is set to '1.10.5'. A checkbox labeled 'Install automatically' is checked. There are buttons for 'Delete Installer' and 'Delete Ant' on the right side. Below the main list, there are 'Add Ant' and 'Add Installer' buttons.

and in Job, select the Ant Versions as follows.

The screenshot shows the Jenkins Job configuration screen for the 'Invoke Ant' step. The 'Ant Version' dropdown is set to 'ANT_HOME'. The 'Targets' field is empty. An 'Advanced...' button is visible at the bottom right.

Installation Issues:

Issue 1: Offline

Mithun Technologies +91-9980923226	Jenkins info@mithuntechnologies.com	Author	Mithun Reddy L
		Web site	http://mithuntechnologies.com

Offline

Offline

This Jenkins instance appears to be offline.

For information about installing Jenkins without an internet connection, see the [Offline Jenkins Installation Documentation](#).

You may choose to continue by configuring a proxy or skipping plugin installation.

[Configure Proxy](#)

[Skip Plugin Installations](#)

Solution

jenkinshomedir/hudson.model.UpdateCenter.xml and change url to use **http** instead of **https**.

Once you changed from https to http, you need to restart the Jenkins.

Issue 1: Jenkins Stat

#service Jenkins start

```
[root@ip-172-31-17-1 jenkins]# service jenkins start
Starting jenkins (via systemctl): Job for jenkins.service failed because the control process exited with error code. See "systemctl status jenkins.service" and "journalctl -xe" for details.
                                                [FAILED]
[root@ip-172-31-17-1 jenkins]#
```

#journalctl -xe

```

directory

```

Solution:

Install the Git.

Issue:

There is insufficient memory for the Java Runtime Environment to continue.

Solution:

Increase the JVM size as follows.

```

vi /etc/sysconfig/jenkins

## Type: string
## Default:      "-Djava.awt.headless=true"
## ServiceRestart: jenkins
#
# Options to pass to java when running Jenkins.
#
JENKINS_JAVA_OPTIONS="-Djava.awt.headless=true -Xmx1024m -XX:MaxPermSize=512m"

```
